## SERVICING THE STEELWORK INDUSTRY

MBSI Detailing Ltd is an innovative and progressive company specializing in the detailing of all types of structures in all the major sectors for the steelwork industry.

We offer a full connection design service providing well presented, checked calculations.

We utilise the latest technology and our team are experts in the use of Tekla Structures 3D BIM software.

We are committed to delivering accurate drawings and our primary aim is to exceed our client's expectations on programme, budget and quality. We understand our client needs and consistently provide cost effective solutions.

Our experienced draughtsmen have extensive knowledge of the steelwork industry and have played key roles in the delivery of some of the most complex structures constructed in the UK.

We have vast experience of the incorporation of secondary trade requirements into our work scope.

We have through a friendly, flexible and professional approach forged close relationships with some of the country's largest steelwork providers.

We welcome the chance to get involved at the early stages of a project and take a pro-active approach in assisting the design team to realise their goals.

We are well aware that the quality of service we provide is dependent on the relationship we build with the client. We strive to ensure that all our clients' requirements are realised in an efficient and timely manner and a testament to this is the significant amount of repeat business we receive from some of the country's largest fabricators.

If you require any further information on the services we offer please do not hesitate to contact us.
