

TEKLA® Structures

Draughter

Modify, Save and Print

> TEKLA STRUCTURES DRAUGHTER – IDEAL FOR:

- > *Opening, viewing and rotating any Tekla Structures model*
- > *Opening and editing drawings*
- > *Saving changes to drawings so that they are always up-to-date*
- > *Printing drawings and taking out reports*

CAN DO:

- > View full model
- > View reference models
- > Collaborate on-line using the model
- > Open property dialogs for viewing
- > Display part characteristics
- > Get information on structural elements (length, weight, etc.)
- > Measure and check lengths, angles, etc.
- > Make inquiries for object information
- > Colorization by attributes
- > Open and print drawings (general layouts and fabrication sketches)
- > Open, edit and save drawings with edits
- > Create and print reports and lists
- > Export drawings to DXF and DWG format
- > In v13.0, animate project progress with 4D feature
- > Drawing types: single part, assembly, multi, cast unit, GA

> You already know how profitable it is to collaborate and share building information right from the beginning of a project lifecycle. Using **Tekla Structures, Draughter** you can be connected to the same model with the rest of the project team members, who work with the same 3D model simultaneously, regardless of their location or discipline.

> Tekla Structures, Draughter is a solution for your Tekla drawing review, modification and redlining. It allows viewing the models but not changing the actual model. You can modify and save all drawings created with Tekla Structures and importantly maintain the intelligent link between the drawings and the model.

> The Draughter licence is ideal for "new" detailers, who have not used the Tekla Structures environment before. You can upgrade your current viewer licence to a Draughter and when you're ready, upgrade a Draughter licence to other configurations. The Tekla Structures, Draughter licence is key and password protected.

CAN'T DO:

- > Model any parts
- > Set automatic part marks
- > Import data
- > Create drawings
