Scope

This document provides additional information to what is presented in the [Tekla Security Center](#).

The scope of the information is the Tekla Online licensing solution as defined in the next chapter.

Tekla Online licensing overview

Tekla Online licensing solution is used for delivering Tekla online licenses to customer companies (customer organizations) and users. It allows customers' administrators to manage their online licenses and their organization users. Solution authorizes the use of the products and services based on the Tekla licenses or roles the user has. Additionally users can create and modify their Tekla Online user profiles.

Basic concepts of the Tekla Online licensing solution are:

Tekla Online profile

Users create their Tekla profile when they sign in to Tekla Online services. In the profile, users defines for example their display name, country information, and preferred language. Users can also upload their profile picture if they like.

Online license

Tekla licenses are generated to the solution as part of business processes such as license purchases, or users initializing the license themselves like in Tekla Campus.

Tekla Online Organization

Organizations represent customer companies in the solution, and are created when companies purchase online licenses. Specified customer contacts are created as administrators of the organizations. Administrators have the rights to invite users to their organization and for example share online licenses with the users.

Tekla Online Admin Tool service

This service is available to all customers who have purchased the online licenses. With this service, the company administrators manage their users, licenses, and users' access to the licenses.

Online services used by the Tekla Online licensing

Tekla Online licensing consists of three services:

Tekla Account service (ATC) contains Tekla Online profile which user creates when first signing in to Tekla Online services. In addition to the user profile information, Tekla Account service contains user's company (e.g. organization), online licenses and access rights, and authorization to the use of the Tekla Online services.

Trimble Identity service (TID) is an identity service provider for Trimble products, including Tekla products and services. It provides single sign-in and authentication to the services.

Tekla Online Admin Tool is a service for organization administrators to manage and control users and licenses of their organization.

Tekla Online licensing security

Tekla Online licensing solution is covered by the security measures and processes described in the [Tekla Security Center](#). Service specific details are described in this chapter.

Cloud security

Tekla Online licensing solution services are operating on Amazon AWS platform. We ensure infrastructure security and high availability of our cloud solution by implementing e.g. following measures to the infrastructure: hardened Linux hosts with automatic patching, isolated VPC, role-based access control and security groups, and 24x7 SOC Team monitoring alerts. Solutions are architected for resilience and high availability and have AWS Shield and AWS WAF Protection.

General information on AWS security can be found in [AWS Whitepapers & Guides](#)

Service security

Measures to ensure service security include for instance using industry standards in the implementation such as authentication protocols (OAuth2&1 and SAML 2.0), and using Json Web Tokens in securing the content of the traffic. Additionally, all network communication uses TLS, sensitive information is encrypted in the database, and account and email verification workflows are enforced.

Continuity and disaster recovery

Tekla Account service and Tekla Online Admin Tool service disaster recovery is based on having all applications and databases deployed in at least 2 isolated data centers (availability zones) using the AWS Cloud tools.

Personal data in Tekla Online licensing

Personal data

Tekla Online licensing contains some personal data of users.

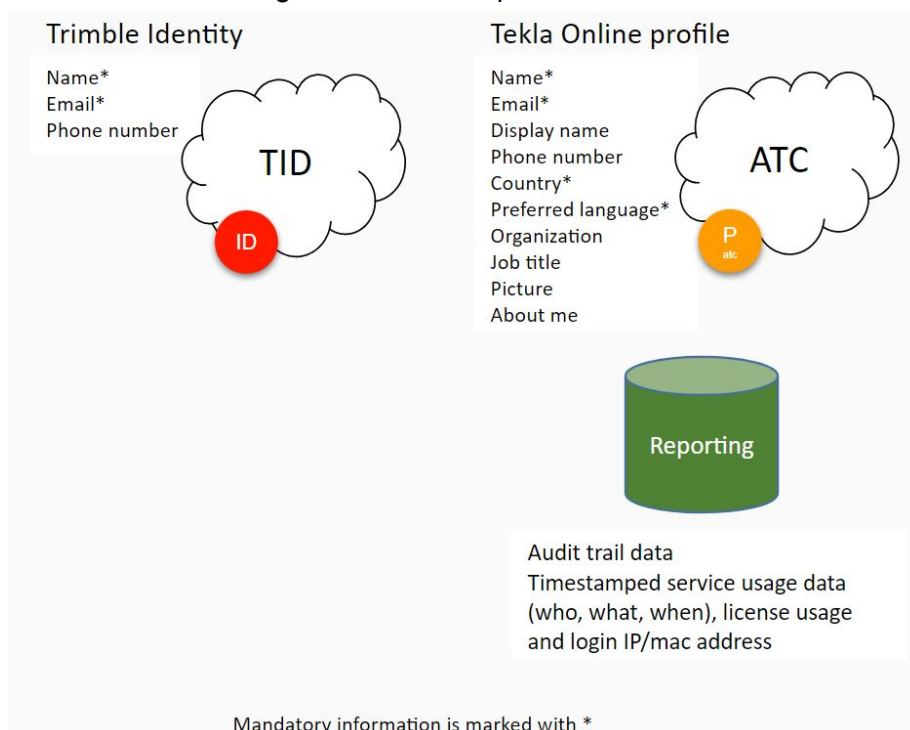

Image 2. Personal data in Tekla Online licensing solution

When user creates her/his Trimble Identity, the service asks for the following personal data:

Email address

First name, Last name.

User creates and maintains her/his personal data in the Tekla Online profile in ATC. The changes are reflected to Trimble Identity for the relevant part.

The phone number is updated to the Trimble Identity profile if provided by the user in the Tekla Online profile.

The personal data in the Tekla Online profile contains the following fields:

Email address

First name, Last name, Display name

Country, Preferred language

Organization, information for users who are using commercial Tekla Online licenses

Optional information: *Profile picture, Job title, Phone number, About me text.*

Access to personal data

The information users have stored to their Tekla Online profile can be viewed by company administrators for their own employees and their external users, and by customer support organizations members at Trimble Solutions and related reseller.

User's display name is visible to other users in some Tekla Online services such as Tekla Discussion Forum in case user participates in discussions, or in Tekla Campus.

We process and protect all personal data according to the descriptions in the [Privacy Notice](#).

Tekla Online licensing data center geographical location

We use the Amazon Web Services (AWS) global cloud infrastructure, which is available within 21 geographic regions around the world.

The AWS infrastructure is designed to deliver a flexible, reliable, scalable, and secure cloud computing environment with a high quality global network performance.

Data center locations of the services are:

Service	Location	Service provider and region
Tekla Account Service ATC	Ireland	AWS Europe (Ireland)
Tekla Online Admin Tool	Ireland	AWS Europe (Ireland)
Trimble Identity service	US	AWS US (Oregon)

Contact Information

If you have any questions or need more information, please don't hesitate to contact your local [Tekla support](#).
